Chick Weight Analysis

The average chick weight is about 261.31. The weights range from 108 to 423. I noticed that the chick weights are different, with some chicks weighing much more than others.

AI Use Appendix

I used ChatGPT to translate and explain the assignment instructions from English into Burmese so I could understand what I needed to do. I also used ChatGPT to help me understand Python code, pandas, and the CSV data analysis steps. ChatGPT helped explain the instructions and guide me through the assignment.
